RENEWAL VISIA SKIN ANALYSIS

To get a understanding of your skin's condition, we begin by using photo imaging. We take several up-close photos of your face using different phases of lighting, to make an evaluation.

The skin analysis machine compares your face against baseline averages (based on skin type and age), and then provides a score for pigmentation, pores, evenness, wrinkles, and sun damage.

We discuss the results you'd like to see, and results-oriented recommendations - just for you!

FACIAL LINES

BOTOX® Cosmetic

BOTOX® Cosmetic is approved by the FDA to treat lines between your eyebrows caused by facial expressions. It is also commonly used to soften the lines on your fore-

head, and crow's feet around your eyes. BOTOX® Cosmetic is safe and requires no downtime. Benefits typically last about four months.

Restylane®

If you are bothered by fine lines and wrinkles, dermal fillers may be the right treatment for you. With age, we experience a depletion of collagen in the skin and consequently a loss of volume. Fillers restore the natural shape to these areas. The results are immediate and last six months to one year.

Juvéderm™

A smooth gel filler that eases under the skin to instantly smooth out "Parentheses Lines" on the sides of your nose and mouth. May also be used to enhance lips and correct smokers lines. So smooth and natural, everyone will notice, but no one will know. Results typically last more than one year.

LASER SKIN REJUVENATION

Tiny micro columns which heal rapidly, correcting wrinkles, texture problems and mild to severe acne scars; providing a dramatically smoother, younger appearance. This procedure causes collagen remodeling and stimulates new collagen production.

Face, Hands, Neck, Décolleté

IPL Photo Skin Rejuvenation

Achieve optimal results by reversing the signs of sun damage and increasing new collagen production which improves your skin's elasticity. Reduce sun spots, age spots and uneven skin tone caused by chronic sun exposure.

Face, Hands, Neck, Décolleté, Arms

Skin Tyte Laser Skin Tightening

This ground-breaking new technology is used to selectively heat the dermal collagen deep in your skin while at the same time cooling the epidermis (outer layer of skin) prior-to, during, and after treatment. The result is partial coagulation and contraction of collagen which tightens the skin.
